

An aerial satellite image showing a large agricultural field. The field is divided into several sections by thin lines, likely roads or irrigation channels. The color of the field is a mix of light green and yellowish-green, suggesting different crops or stages of growth. A prominent feature is a large, dark green rectangular area in the lower right quadrant, which appears to be a different type of crop or a specific field section. The field is bordered by a green line, possibly a fence or a boundary. The surrounding area includes a mix of brown and green, indicating a mix of land use or vegetation. The text "North Ag Field" is overlaid in yellow on the upper left portion of the field.
